A computer programmer, sometimes called a software developer, a programmer or more recently a coder (especially in more informal contexts), is a person who creates computer software. The term computer programmer can refer to a specialist in one area of computers , or to a generalist who writes code for many kinds of software.

Programmer - Wikipedia

After a software developer designs a computer program, the programmer writes code that converts that design into a set of instructions a computer can follow. They test the program to look for errors and then rewrite it until it is error-free. The programmer continues to evaluate programs that are in use, making updates and adjustments as needed.

What Does a Computer Programmer Do?

Computer programmers write and test code that allows computer applications and software programs to function properly.

Computer Programmers : Occupational Outlook Handbook: : U ...

The view means presentation of the model in a particular format. The controller responds to the user input and performs interactions on the data model objects. The controller receives the input, optionally validates it and then passes the input to the model.

Model-view-controller - Wikipedia

Computer Programmers write code through the use of computer languages, such as C++ and Java. Computer programmers create instructions for computers to generate meaningful output. Overall, it is the responsibility of computer programmers to write code and manipulate it into a language that computers can understand and follow.

Computer Programmer Job Description: Salary, Skills, & More

The job of a computer programmer is vitally important in today's digital-focused economy, which is why the number of openings in this field continues to grow. Programmers write code for computer programs and mobile applications.
