## **Chromatography | ScienceDirect**

Paper chromatography has proved to be very successful in the analysis of chemical compounds and lipid samples in particular. In paper chromatography, the sample mixture is applied to a piece of filter paper, the edge of the paper is immersed in a solvent, and the solvent moves up the paper by capillary action.

## **What is Paper Chromatography? Principle and Procedure**

Applications of Paper Chromatography Chromatography is used in chemistry in a number of applications: Unknown substances left at a crime scene can be identified by separating the molecules that make them up. Matching this unknown chromatogram to chromatograms of known substances can help identify the unknown substance providing a clue to the crime.

## **What Is Paper Chromatography and How Does it Work ...**

There are different types of chromatography and one of them is paper chromatography. The entire procedure requires the use of a specialized paper, specifically, a cellulose filter paper that serves as a stationary phase where the separation of compounds happens. In other words, paper chromatography is a method that makes use of a paper sheet or strip as an adsorbent in the stationary phase through which a particular solution is allowed to pass.

## **What is Paper Chromatography - How does it work, procedure ...**

Paper chromatography is an analytical method used to separate colored chemicals or substances. It is primarily used as a teaching tool, having been replaced by other chromatography methods, such as thin-layer chromatography. A paper chromatography variant, two-dimensional chromatography involves using two solvents and rotating the paper 90° in between.

## **Paper chromatography - Wikipedia**

It is used to purify of any sample and direct comparison is done between the sample and the authentic sample. It is used in the food industry, to separate and identify colours, sweetening agent, and preservatives. It is used in the cosmetic industry. It is used to study if a reaction is complete.

## **Thin Layer Chromatography (TLC) - Principle, procedure ...**

The technique gave the desired reproducibility, and beginning in the 1940s paper chromatography found wide application in the analysis of biologically important compounds, such as amino acids, steroids, carbohydrates, and bile pigments. In this field it replaced, to a large extent, the column technique initiated by Tsvet.
