The present book is the outcome of efforts to introduce topological connectedness as one of the basic tools for the study of necessary conditions for an extremum. Apparently this monograph is the first book in the theory of maxima and minima where topological connectedness is used so widely for this purpose.

Download Connectedness and Necessary Conditions for an Extremum (Mathematics and Its Applications Book 431) (English Edition) pdf books We present the synthesis of the well known Dybovitskii'-Milyutin approach for the study of necessary conditions for an extremum, based on functional analysis, and topological methods. This synthesis allows us to show that in some cases we have the following important result: if the Euler equation has no non trivial solution at a point of an extremum, then ...

Social connection improves physical health and mental and emotional well-being. We all think we know how to take good care of ourselves: eat your veggies, work out and try to get enough sleep. But how many of us know that social connection is just as critical?

Connectedness is one of the principal topological properties that are used to distinguish topological spaces. A subset of a topological space  $X$  is a connected set if it is a connected space when viewed as a subspace of  $X$ . Some related but stronger conditions are path connected, simply connected, and  $n$ -connected.

In this context, investigation into the connectedness among financial markets and the systemic risk spillovers contagion mechanism across sectors or markets become important and necessary, which is helpful for regulators to identify sources of risks and formulate intervention strategies, and for investors to make smarter portfolio strategies.

We generalize this in several directions. First, we give necessary and sufficient conditions (in terms of generating functions) for the probability of connectedness in a suitable class of graphs to tend to a limit strictly between zero and one.

School connectedness—the belief held by students that adults and peers in the school care about their learning as well as about them as individuals—is an important protective factor. Research has shown that young people who feel connected to their school are less likely to engage in many risk behaviors, including early sexual initiation, alcohol, tobacco, and other drug use, and violence ...
