Course Description. This course develops the fundamentals of feedback control using linear transfer function system models. Topics covered include analysis in time and frequency domains; design in the s-plane (root locus) and in the frequency domain (loop shaping); describing functions for stability of certain non-linear systems; extension to

1.3 Design of Feedback Control Systems.
Feedback control systems must be designed to suit a predetermined purpose. Normally, only the controller can be appropriately designed, whereas

The only shortcoming is a lack of nonlinear analysis and a weak digital control treatment. But for continuous linear systems this is a great book to learn from. It is also great for self ...
