Basic calculus explains about the two different types of calculus called “Differential Calculus” and “Integral Calculus”. Differential Calculus helps to find the rate of change of a quantity whereas integral calculus helps to find the quantity when the rate of change is known. Important Calculus Topics:

Introduction to Calculus (Differential and Integral Calculus)

The differential and Integral calculus deals with the impact on the function of a slight change in the independent variable as it leads to zeros.

Furthermore, both these (differential and integral) calculus serves as a foundation for the higher branch of Mathematics

AND INTEGRAL CALCULUS

The fundamental concepts and theory of integral and differential calculus, primarily the relationship between differentiation and integration, as well as their application to the solution of applied problems, were developed in the works of P. de Fermat, I. Newton and G. Leibniz at the end of the 17th century.
