equations with emphasis on the dynamical systems point of view. However, it also covers some classical topics such as differential equations in the complex plane and boundary value (Sturm-Liouville) problems. It only requires some basic knowledge from calculus, complex functions, and linear algebra which should be covered in the usual courses.

Ordinary Differential Equations and Dynamical Systems

The Journal of Dynamics and Differential Equations answers the research needs of scholars of dynamical systems. It presents papers on the theory of the dynamics of differential equations (ordinary differential equations, partial differential equations, stochastic differential equations, and functional differential equations) and their discrete analogs.

In particular, a differential equation is linear if it is linear in terms of the unknown function and its derivatives, even if nonlinear in terms of the other variables appearing in it. As nonlinear dynamical equations are difficult to solve, nonlinear systems are commonly approximated by linear equations (linearization).

Nonlinear system - Wikipedia

This book (the original version) has all the basics to introduce the future differential equations/dynamical systems researchers into the field. Written by authorities in the field (Hirsch and Smale,) this text offers a wide variety of topics, including linear systems, local and global stability theory for non-linear systems, and applications to physics and biology.
