plus the accessory organs of digestion (the tongue, salivary glands, pancreas, liver, and gallbladder). Digestion involves the breakdown of food into smaller and smaller components, until they can be absorbed and assimilated into the body. The process of digestion has three stages. The first stage is the cephalic phase of ...

Human digestive system - Wikipedia

Aging has only minor effects on the structure of the small intestine, so movement of contents through the small intestine and absorption of most nutrients do not change much. However, lactase levels decrease, leading to intolerance of dairy products by many older adults (lactose intolerance). Excessive growth of certain bacteria (bacterial overgrowth syndrome) becomes more common with age and ...

Effects of Aging on the Digestive System - Digestive ...

The low ruminal pH causes a chemical rumenitis, and the absorption of lactate, particularly d-lactate, results in lactic acidosis and acidemia. In addition to metabolic (strong ion) acidosis and dehydration, the pathophysiologic consequences are hemoconcentration, cardiovascular collapse, renal failure, muscular weakness, shock, and death.

What is pressure? - BBC Bitesize

A fistula is an abnormal channel connecting one organ with another or with the skin. Intestinal inflammation from diverticulitis can lead to the development of fistulas that connect the large intestine with other organs. Fistulas usually form when an inflamed diverticulum in the large intestine is touching another organ (such as the bladder).
