### How to Make Perfect Hard Boiled Eggs - How Long to Hard ...

The egg is the organic vessel containing the zygotein which an embryo develops until it can survive on its own, at which point the animal hatches. An egg results from fertilizationof an egg cell. Most arthropods, vertebrates(excluding live-bearing mammals), and molluskslay eggs, although some, such as scorpions, do not.

### Egg - Wikipedia

The answer may be choline, a compound found concentrated in eggs. The choline in eggs, like the carnitine in red meat, is converted into a toxin called trimethylamine by bacteria existing in meat-eaters' guts. Trimethylamine, once oxidized in the liver, appears to increase the risk of heart attack, stroke, and premature death.
