Elasticsearch In Action

Start Elasticsearch. Start Elasticsearch on your VM with the following command: `sudo systemctl start elasticsearch.service` This command produces no output, so verify that Elasticsearch is running on the VM with this curl command: `sudo curl -XGET 'localhost:9200/'` If Elasticsearch is running, you see output like the following:

Deploy Elasticsearch on a development virtual machine in ...

Elasticsearch is generally used to index data of types like string, number, date, etc. However, what if you wanted to index a file like a .pdf or a .doc directly and make it searchable? This is a real-time use case in applications like HCM, ERP, and e-commerce.

How to Index Attachments and Files to Elasticsearch

Elasticsearch can be used to search all kinds of documents. It provides scalable search, has near real-time search, and supports multitenancy. Elasticsearch is distributed, which means that indices can be divided into shards and each shard can have zero or more replicas.
