My dad was an electrical engineer by trade with a lot of experience in aircraft radio design. After a series of Digifant problems he decided that the VW grounding system was not good enough so he added a #8 wire from the battery to the engine bay with stops at all the stock ground locations. Since then, no ground-related issues.

If you have a fiberglass body you will need to attach several heavy ground wires to the engine block. Run one to the rear, two to the dash area (if you have a lot of accessories), and one to the front. Each individual ground can be routed to a central location and all of the components in that general area can be grounded to it.

VW added additional colors with newer model years, but this should give you a good map of sorts for the spaghetti under your hood or dash. Using this list, some patience, and a few electrical tools such as a test light and some wire stripper-crimpers, wire, and electrical connectors you should be able to patch and repair any issues in your aircooled VW.
