In the material selection phase, the minimum and maximum properties are examined. The designer can modify the design and/or process for possible improvements or adjustments because he knows the limits of the materials exactly. Also in case of a failure, he has the ability to redesign it easily.

Why Selection of Engineering Materials is Important ...

Engineering materials like metals, alloys, polymers, ceramics, and composites are characterized by their unique properties. It is suitable for various applications like tool steel for high speed machining and composites for light weight automobiles.

Chapter 1 Solutions | Engineering Materials 9th Edition ...

This text covers important engineering materials, presents the fundamentals of every materials system, and provides enough property information to allow reasonable material selection in most industries. Gb.udinski, this is clearly not a "materials" defect, as selection of a different material would not have fixed this problem.
