1. To formulate this transportation problem, answer the following three questions. a. What are the decisions to be made? For this problem, we need Excel to find out how many units to ship from each factory to each customer. b. What are the constraints on these decisions? Each factory has a fixed supply and each customer has a fixed demand. c.

Transportation Problem in Excel - Easy Excel Tutorial

Here, 'lookup_value' specifies the value to be searched inside the 'table_array'. It can either be a value or a reference.

'table_array' is the range with two or more columns.

'table_array' argument can receive a range reference or a named range. The leftmost column of this range must contain the 'lookup_value'. 'column_index' is the relative index of the column whose ...
