"Exergy is the amount of work obtainable when some matter is brought to a state of thermodynamic equilibrium with the common components of the natural surroundings by means of reversible processes, involving interaction only with the above mentioned components of nature".

Energy, Exergy and Thermodynamics

In thermodynamics, the exergy of a system is the maximum useful work possible during a process that brings the system into equilibrium with a heat reservoir, reaching maximum entropy. W When the surroundings are the reservoir, exergy is the potential of a system to cause a change as it achieves equilibrium with its environment.
