Fading and Shadowing in Wireless Systems, 2nd edition ...

Shadowing Shadowing is the effect that the received signal power fluctuates due to objects obstructing the propagation path between transmitter and receiver. These fluctuations are experienced on local-mean powers, that is, short-term averages to remove fluctuations

due to multipath fading.

Shadowing - Wireless Communication

In wireless communications, fading is variation of the attenuation of a signal with various variables. These variables include time, geographical position, and radio frequency. Fading is often modeled as a random

Fading - Wikipedia

Compared to their wireline counterparts, wireless channels exhibit higher BERs, typically have a smaller bandwidth, and experience multipath fading and shadowing effects. At the IP level, the wireless channel can also be treated as a packet erasure channel, as it is seen by the application.

Shadowing Effect -
