Net profit varies greatly between companies and industries. In this instance, it is more appropriate to consider net profit as a percentage of sales. Net profit also shouldn't be used as a measure of how much cash a company earned during a given period. This is because the net profit formula accounts for non-cash expenses like depreciation.

Net Profit | Formula & Meaning | InvestingAnswers

Marginal cost, marginal revenue, and marginal profit all involve how much a function goes up (or down) as you go over 1 to the right — this is very similar to the way linear approximation works. Say that you have a cost function that gives you the total cost, $C(x)$, of producing x items (shown in the figure below).
