Remove the lock nuts from the bolts holding the starter in position. Most Mercruiser starters have bolts that will run from the bottom to the top, rather than from side to side like on a car starter. Once the nuts are off, reach underneath and pull the bolts out. Remove the starter from the engine compartment by lifting it out.

The temperature on my port engine seems to be a bit low this season, so I decided to test and replace the thermostat - '05 Mercruiser 5.0 MPI. I've removed the thermostat housing from the block, but the thermostat is held in by a nylon spacer (23-806922), and the old spacer is stuck in there pretty good. Mercruiser says "just pull the spacer out".
