As well as using mathematics to work out predictions from economic models where the relationships are already quantified, one also needs mathematics in order to estimate the parameters of the models in the first place. For example, if the demand relationship in an actual market is described by the economic model $q = 1,200 - 10p$ then this would mean that the parameters (i.e. the numbers 1,200 and 10) had been estimated from statistical data.
