kerosene egg incubator | BackYard Chickens - Learn How to ...

Our incubator design uses a plastic foam cooler to insulate the eggs and keep the heat from the light bulb from escaping, and we built an outer case from 1/2-inch plywood to protect the foam. However, there are many variations that can be just as successful.

Build Your Own Egg Incubator - Hobby Farms

Test the incubator. Before putting in the eggs, turn on the light and monitor the temperature and the humidity for a day or so. Make adjustments to the heat and humidity until they are at optimal levels. The temperature should be kept at 99.5 degrees through-out the incubation. Optimal humidity varies: it should be between 40 to 50 percent for ...

How to Make a Simple Homemade Incubator for Chicks: 11 Steps

The kerosene incubator for egg hatchery was designed, constructed, tested and found satisfactory. The efficiency of the kerosene incubator was calculated based on 16 eggs hatched out of 20 eggs at the temperature range of 37-39c within 19-22 days and found to be 80%. The materials are locally sourced and are available.

Samuel Adeoye Akanji and Gideon A. Duvuna
