System of Equations Calculator - Symbolab Math Solver

When you solve systems with two variables and therefore two equations, the equations can be linear or nonlinear. Linear systems are usually expressed in the form $Ax + By = C$, where A, B, and C are real numbers. When solving linear systems, you have two methods at your disposal, and which one you choose depends on the problem:

Linear inequalities, convex quadratic inequalities, matrix norm inequalities, and various constraints from control theory such as Lyapunov and Riccati inequalities can all be written as LMIs. Further, multiple LMIs can always be written as a single LMI of larger dimension. Thus, LMIs are a useful tool for solving a wide variety of optimization
