Miller Restriction Orifice Calculations Clouny

This calculator let you calculate the restriction orifice size based on pressure drop and flow rate. The flow measurement using an orifice plate is based on the application of energy conservation to a flow, measuring the difference in pressure between two points (P1 and P2), at this points the flow has different speeds.

Calculate cavitation index, Kd by equation (15), and compare with minimum allowable value. If cavitation index ≥ 0.37 (or 0.93), then the orifice diameter is acceptable. If the cavitation index < 0.37 (or 0.93), then a single orifice is unable to accommodate the required pressure drop.

From R.W. Miller. In April 2004 ASME approved separate standards for Orifice, Nozzle, and Venturi Flowmeters. There is a major change to the . Orifice Discharge coefficient computational equation for all tappings ; The Gas Expansion factor equation for all tappings; ASME-3M and International standard ISO 5167 now use identical equations.

One type is the restriction orifice plate, which in construction and calculation follows the orifice plate, i.e. the restriction orifice plate has a thickness of 3- 6 mm depending on the size of the tube. The discharge coefficient of the restriction orifice plate is, as for the orifice plate, approximately 0.6 according to ISO 5167.
