By age four, most humans have developed an ability to communicate through oral language. By age six or seven, most humans can comprehend, as well as express, written thoughts. These unique abilities of communicating through a native language clearly separate humans from all animals.

### The Origin of Language and Communication

Human languages are far more complex than any animal communication system. Furthermore, they are learned, rather than innate, a fact which partially accounts for their great diversity. Human languages are semantically compositional, generating new meaningful combinations as functions of the meanings of their elementary parts (words). This is unlike any known animal communication system (except ...
