Polynomials Worksheets, Games and Online Practice

Here is one example with adding polynomials:

$$= (-x^2 + 2x + 3) + (2x^2 + 4x - 5) = -x^2 + 2x + 3 + 2x^2 + 4x - 5 = x^2 + 6x - 2.$$

We remove the brackets, and since we have a plus in front of every bracket, the signs in the polynomials don't change.

Add polynomials (intro) (practice) | Khan Academy

If you multiply polynomials you get a polynomial So you can do lots of additions and multiplications, and still have a polynomial as the result. Also, polynomials of one variable are easy to graph, as they have smooth and continuous lines. Example: $x^4 - 2x^2 + x$
