Cochran (1977) has given a technique for sample size determination. Cochran (1977) stated that in order to determine the sample size, one has to identify the limits of the errors in the items that have been considered as the most essential items in the survey. According to Cochran (1977), an estimation of the required sample size is initially ...

sampling theory as it has been developed for use in sample surveys. It contains illustrations to show how the theory is applied in practice, and exercises to be worked by the student. The book will be useful both as a text for a course on sample surveys in which the major emphasis is on theory and for individual reading by the student.

**Sampling Techniques - renaś**  
Slovin's Formula calculates the number of samples required when the population is too large to directly sample every member. Slovin's formula works for simple random sampling. If the population to be sampled has obvious subgroups, Slovin's formula could be applied to each individual group instead of the whole group. Consider the example problem.
