Scientific notation is the way that scientists easily handle very large numbers or very small numbers. For example, instead of writing 0.0000000056, we write 5.6 x 10-9. So, how does this work? We can think of 5.6 x 10-9 as the product of two numbers: 5.6 (the digit term) and 10-9 (the exponential term). Here are some examples of scientific ...

Math Skills - Scientific Notation
Enter a number and see it in Scientific Notation: Now try to use Scientific Notation yourself: Other Ways of Writing It. 3.1 × 10^8. We can use the ^ symbol (above the 6 on a keyboard), as it is easy to type. Example: 3 × 10^4 is the same as 3 × 10 4.

Scientific Notation - MATH
The small number to the right of the 10 in scientific notation is called the exponent. Note that a negative exponent indicates that the number is a fraction (less than one). The line below shows the equivalent values of decimal notation (the way we write numbers usually, like "1,000 dollars") and scientific notation (103 dollars).

What Fun! It's Practice with Scientific Notation!
If we mistakenly rounded 0.8846 to two decimal places (0.88) and then cubed the answer we would have gotten 0.68 which is not the correct answer. Scientific Notation. When a calculator presents a number in scientific notation, we must pay attention to what this represents. The standard way of writing a number in scientific notation is writing ...

WS 11.8 and 11
Accidentals are simply the little symbols you sometimes see by a note (either in scientific notation or on a staff) that give whether the note is sharp, flat, or natural. ♯ means that the note is sharp, or one semitone above natural. This means that the exact pitch will be exactly halfway between the note given and the next note above it.
