We can segregate Software Architecture and Design into two distinct phases: Software Architecture and Software Design. In Architecture, nonfunctional decisions are cast and separated by the functional requirements. In Design, functional requirements are accomplished. Software Architecture. Architecture serves as a blueprint for a system. It provides an abstraction to manage the system complexity and establish a communication and coordination mechanism among components.

Developer experience: an essential aspect of enterprise ...

Behind every enterprise architecture, there's a group of developers who have to make it work. Sometimes that work is easy, and other times, it's hard. The ease or difficulty of an implementation depends on a number of factors; for example, the inherent complexity of the technology being used, the intended scale of the architecture, or the technical maturity of the organization implementing ...
