Australian taxonomists discover more new species every year than almost any other country in the world. Even so, best estimates are that only 30% of Australian species have been discovered and named so far. Taxonomy Australia is working to accelerate the discovery of all Australia's species, before it's too late.

All extant marsupials are endemic to Australasia and the Americas. A distinctive characteristic common to most of these species is that the young are carried in a pouch. Well-known marsupials include kangaroos, wallabies, koalas, phalangeriformes, opossums, wombats, Tasmanian devils, and the extinct thylacine.
