Bone marrow examination is an important part of the evaluation of the hematopoietic system.

Cytologic evaluation of bone marrow in rats: indications ...

- cytologic abnormalities This bone marrow is from a patient with chronic myelocytic leukemia. It is hypercellular and contains only a small amount of fat. There are a number of megakaryocytes, which are the largest cells of the bone marrow.

Bone marrow histology - HemePathReview

Cytologic Examination. The study of cells, their origin, structure, function, and pathology is called cytology. Cells are continually shed (exfoliated) from tissues that line the cavities and hollow organs of the body. These exfoliated cells may float in the fluid and mucous material bathes or passes through these cavities.
