produced by a device to stimulate the nerves for therapeutic purposes. TENS, by definition, covers the complete range of transcutaneously applied currents used for nerve excitation although the term is often used with a more restrictive intent, namely to describe the kind of pulses produced by portable stimulators used to reduce pain.

**Stimulation Tens  
electrical nerve  
stimulation -  
Wikipedia**

Transcutaneous electrical nerve stimulation (TENS) is a technology that uses a small device to deliver electrical current into tissues to help alleviate pain. TENS is helpful in treating various conditions, including: chronic neck pain and chronic back pain.

Stimulators (TENS)**

TENS stands for  
transcutaneous  
electrical nerve  
stimulation.

Transcutaneous means  
across the skin. TENS is  
also called  
electrotherapy. A TENS  
machine passes  
electricity across the  
skin to stimulate the  
nerves and relieve  
pain.
