Keep Navigation Simple. Keypads and touch screens don't make for precise navigation like mice do - so try to: Prioritize navigation based on the way users work with functionality - the most popular go at the top. Minimize the levels of navigation involved. Ensure labelling is clear and concise for navigation.

Some Simple Guidelines - The Interaction Design Foundation

In the context of websites, a web interface is a page that users interact with when a site is fully downloaded on a web browser. A website is a collection of code, but this code is not suitable for user interaction. In order to ensure that visitors can use a site, the code must result in a web interface that users can easily interact with.

Website Interface - Web Hosting Reviews by Real Users ...

User interface design, especially in modern Web applications, doesn't have to be in a finished state because you can always keep evolving and improving it. Think of it like Kaizen. The old model of distributing software on CDs carried a big downside: once you burned and shipped the product, you couldn't change it ... well, not very easily.
