then there are "infinite solutions", meaning, when graphed, the two equations would form the same line. If the variables disappear, and you get a statement that is never true, such as $0 = 5$ or $4 = 7$, then there is "no solution", meaning, when graphed, the two equations would form parallel lines, which never intersect. "No solution" means that there is no value, not even 0, which would satisfy the equation. Also, be careful not to make the mistake of thinking that the equation $4 = 5$ means that 4 and 5 are values for x that are solutions. If you substitute these values into the original equation, you'll see that they do not satisfy the equation.

Special Cases and Applications
