### William Stallings Computer Organization and Architecture

characters per second, or one every 833  $\mu$ s. The DMA therefore "steals" every 833rd cycle. This slows down the processor approximately  $1/833 \times 100\% = 0.12\%$  1.9 a. The processor can only devote 5% of its time to I/O. Thus the maximum I/O instruction execution rate is  $10^6 \times 0.05 = 50,000$  instructions per second.

### William Stallings - Operating systems - Instructors Manual...

Author William Stallings emphasizes both design issues and fundamental principles in contemporary systems, while providing readers with a solid understanding of the key structures and mechanisms of operating systems. He discusses design trade-offs and the practical decisions affecting design, performance and security.

### Stallings, Operating Systems: Internals and Design ...

William Stallings is an American author. He has written textbooks on computer science topics such as operating systems, computer networks, computer organization, and cryptography. He also maintains a website titled Computer Science Student Resource.

### William Stallings - Wikipedia
